HEAT WARNING!

Solid surfacing withstands heat better than ordinary surface materials. However, hot pans, as well as heat generating appliances, like frying pans, griddles, crockpots, etc., can damage the surface or cause the material to crack. To prevent heat damage, always use a hot pad or trivet with rubber feet to protect your solid surface countertop. Heat damage is not covered under the manufacturer or fabricator warranty. Please refer to the care and maintenance information or contact Cache Valley Counter Tops with any questions.

CVCT should have left 1-2 trivets at the time your countertop was installed. If you did not receive these, please come to our showroom and pick one up. Use these trivets under all hot items and heat producing appliances.
